Pictures	Slide show of thumbnails	Setup slideshow
Progress	Copy, delete, rip, burn, etc.	
Connection timer	Minutes online	Minutes since dial (international), disconnect, traffic
Timer	Counter	Count up/down.
Parental controls	Time remaining, status	Override
Language bar	Current language, toggle between languages	More settings
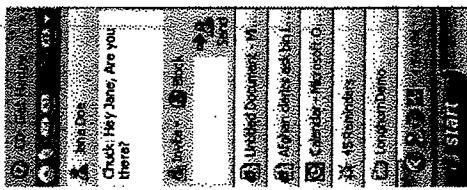

Description of the feature in pri order:

1. Open apps can provide info through their task tile (beyond just window title)
2. Open applications can be controlled from their task tile
3. Tiles have a flyout that offer more status and control
4. Tiles can be larger than one line if need be. (makes sense when stacked vertically in a bar)
5. When space is short, the tiles shrink in an intelligent way. (mfu stay big)
6. Background apps and services can provide ui in a similar way (replace need for deskbands; more standard ui for tray items)

UI states:
- Tile: just one line
- Large tile: Up to n lines
- Flyout: standard menu available from tile
- Window: normal restored or maximized window

Transition between large and small tile:
- No room for each tile to be large
- Only MFU get to be large
- Details...

Glommed windows use flyout?

Possible app uses

Start Page

Goals
- Status & notification (Welcome back... What did I miss while I was away?)
- Expose breadth of the computer (Promote activity centers)
- Online – expose breadth of network (MSN home page)
- Give access to what a user is most likely to do
- Oem/partner/corporate branding
- Extension of welcome screen calendar (personal.net) [Richard Banks (personal.net design lead (hip))]]
